

Phone View

Advanced Phone Management

Unified FX introduce an advanced phone management application designed to provide the simplest way to manage IP Phones on a day to day basis. The heart of Phone View is a simple and intuitive user interface allowing the management of many phones at the same time using a familiar visual interface.

"Never send an engineer to site again" other than for physical phone faults. This is only possible using the full remote control and state management available via Phone View. The ability to see exactly what the users sees and interact with the phone down to the individual key press removes the need to attend site unless the phone has a physical fault or is off the network.

Usage Examples

- Remote site/handset testing
- Bulk log in/out of users
- Remote user training/monitoring
- Send system messages to multiple handsets
- Bulk phone configuration changes
- Call load testing
- Phone feature testing
- Granular management of firmware upgrades
- Capture and export phone serial numbers
- Bulk change of phone backgrounds

Benefits

- Reduced operational costs
- Improve real-time visibility of IP phone estate
- Flexible control of change and state management
- Full control and visibility of IP handset
- Improved testing and deployment of IP phones

FEATURES

- Full Handset Control
- Works Across Clusters Seamlessly
- Dynamic Asset Management
- Log Multiple Users In/Out
- Enhances Testing
- Simple & Efficient Interface
- Granular Selection of Phones
- Manage Phone Backgrounds

System Requirements

- Windows XP or above
- 2GB DRAM
- 2 GHz CPU
- 500 MB Disk Space
